PREFACE

THE best types of examples and applied problems to be found in American or Foreign Textbooks or collections of examples are included in this book.

All examples have been constructed by the author, and the subject matter covers standard courses of study and meets college-entrance requirements.

The collection is adapted for use with any textbook.

In presenting a new subject nothing is too simple for illustrative material, and accordingly a great number of very simple single-step process examples have been included.

The following new features are presented: New Mental Exercises; new types of very simple Process-Examples; new types of Blank Forms; new types of Preparatory Examples, and an exercise on the Functional Notation. Many arithmetic examples are found in the first parts of exercises; Decimal Fractions are used commonly; there is a new exercise on Incomplete Polynomial Squares, and a very complete exercise on Complex Fractions.

The exercise on Rationalization contains a great variety of forms and in particular has "confusing forms" grouped together.

There is an exercise on Exponential Equations and a set of Equations having Irrational Coefficients.

New types of Proportion Examples apply the Transformation Principles, the Determination of Specified Ratios, and Elimination.

The exercises on Proportion are so constructed that, if desired, the subject may be taken with fractional equations early in the course.

The treatment of Graphs is simple, and Intersecting Lines are so chosen that they meet near the origin.

There are many new practical applied problems.

Under the head of Equivalent Equations a very simple introduction is given to Linear Equations.

The collection of examples on Fractional and Literal Equations is very complete and simple, and many forms occurring in later mathematical work are given.

The Completion of the Square with reference to a given Binomial is carefully worked out both in factoring and in quadratic equations.

There is an exercise on Special Irrational Equations in both Exponential and Radical Notation.

Special exercises for Synthetic Division and Applications of the Remainder Theorem are provided, and the treatment of Factoring and Quadratic Equations is very complete.

The review exercises contain many examples requiring distinctions to be made between Confusing Forms, and the examples are so chosen as to afford Cumulative Reviews at different points.

The Index cross-classifies the examples in such a way that principles may be quickly illustrated by choosing examples from different subject-headings.

Applied Problems, which have to do with questions or situations which would reasonably require or admit of algebraic solution, have been included. Questions which would naturally arise in the search for truth have been made the basis for practical problems, but there are no falsely practical problems which are concerned with unreal situations or which arise from juggling with statistics or which bring in information which may of itself be interesting in its proper place, but which has no reasonable or sensible place in illustrating algebraic principles.

The book is especially adapted for use in examinations because of the great variety of material and also because of the fact that no definitions or explanations are given.

The author wishes to acknowledge the enthusiastic reception which has been given his examples by teachers using his First Course in Algebra, and especially to thank the teachers of mathematics in his home city who have shown such a friendly attitude toward his work and whose constructive criticisms and recom-

mendations have been of great value in the preparation of the present collection of examples.

He would especially thank the Committee of Teachers from the four Worcester High Schools, Mr. Geo. H. Boyden, Miss Grace L. Hill, Miss A. Mae Lawrence, Mr. Wendell P. Parker, Miss Harriet R. Pierce, Mr. Chester T. Porter, and Miss Mary Trumbull, who inspired the present work.

He would extend thanks to the Superintendent of Schools, Mr. Homer P. Lewis, for his kind interest and encouragement, extending over many years.

He would also express sincere and grateful appreciation to the Assistant Superintendent of Schools, Mr. John F. Gannon, whose interest and enthusiasm in the undertaking have been a large contributing factor to its successful completion.
